## How To Insert The Cord

Once you have assembled your lamp...you will want to install the cord. Please be sure that you use a "Cool Touch" 40 Watt Bulb or less. You do not want any heat coming from the bulb. A "Cool Touch" LED or CFL bulb will work nicely.

Loosen 2 pieces in a joint where pieces connect. Feed the light cord into the shape until the lightbulb is suspended into the center of the shape without the possibility that it can touch the pieces of the shade. Close the pieces you had opened around the cord.

You can check that the lightbulb is in the center by loosening one of the pieces on the side of your shape and looking in.
